Life and Property Post-Fire Susceptibility

-  1 - 10
-  11 - 18
-  19 - 27
-  28 - 36
-  37 - 45
-  46 - 53
-  54 - 62
-  63 - 71
-  72 - 79
-  80 - 88

Numeric values above represent progressively increasing relative (watershed by watershed) susceptibility of Values-at-Risk to Post-Fire Hazards. The values shown represent the average of several VAR and hazard intersections for Life and Property, each calculated on a per HUC12 basis. Basins with no estimated risk are shown as blank/empty. The maximum possible value of 100 would represent the highest presence of Values-at-Risk and the highest likelihood of Post-Fire Hazard occurrence.

 Provides a watershed-by-watershed assessment of total post-fire risk against Life and Property Values-at-Risk (VARs). Life and Property includes buildings and Transportation infrastructure.

* HUCs are described at: <https://water.usgs.gov/GIS/huc.html>
